## 1. Introduction

### 1.1. Introduction to Project:

Isn't it so interesting how something called 'time' exists and everyone's lives depends upon it? Well, certainly the passage of time is involuntary, and every existing being has to run with time. To catch up and keep in track with the precious time, invention of watches have begun way back, and now have become a part of our lifestyle and fashion.

Presenting you our watch business, with Timeless Elegance in Every Wave: Kyma. THE watch collection, that never goes out of style. The widest collection of watches, whether it be a dress watch or a smart watch, watches for men, women or both, we present you the best options to go with the flow of time.

In this coursework, we have developed an e-commerce website using HTML, CSS and JavaScript. The website is not completely functional, but can perform some events. It consists of 5 pages, Home page, Products page, Blog page, About Us page which includes a survey form and Research page. The home page was developed by Aaki Prajapati, Products page by Simran Bist, Blog page by Sabal Bhandari, About Us page by Swoyam Maharjan and Research page by all 4 of the members.

### 1.2 Goals and Objectives:

The concept of e-commerce has eased business companies as well as customers, as it provides a better platform for consumers to dive into what their favourite websites have to offer without having to visit stores physically. Our website also aims to provide a wide variation of luxury watches through which they can have clear information about their choice of watch, price ranges and designs.

#### a. Promotion of the brand:

Through the concept of e-commerce the website has more potential to reach to larger audiences, from all age groups and have an overview of the services our

business could offer them. Not only would it benefit us as an organization, but also the customers as they can look into the products of their choices, staying at home.

**b. Saves time:**

The major benefit of an e-commerce website is that customers do not have to give an extra time to visit stores physically, and look as well as choose from the wide variety. Through such websites, they can look into images of watches, and with just one click, they can have full description of the required products which is a lot faster than visiting stores.

**c. Cost- effective:**

Creating an e-commerce website is way cheaper than opening a physical store. Money for infrastructure, building and other big to small facilities is saved and can be re-invested into making a better website. Any company's goal is also to save the company's finance, and re-invest them wisely to provide enhanced facilities to the users.

**d. Development of skills:**

Through the concept of e-commerce, developers have a platform to showcase their talent. It enhances their developing skills as well as marketing and communication skills. They learn to cope up with different types of customers, apply strategic business plans and have enhanced leadership skills too. Through feedbacks from the customers, developers have a great opportunity to improve their skills too.

### 1.3 HTML, CSS and JavaScript

While developing the website, we used three different types of languages, i.e., HTML, CSS and JavaScript. Each language played a significant role in developing this website. HTML is used to provide the basic structure or blue print of the webpage. CSS, on the other hand, is used to enhance the website's visual appeal by providing proper styling, and JavaScript is used to make the webpage interactive by adding functionality.

#### a. HTML:

"HTML stands for Hyper Text Markup Language (W3 Schools, n.d.)," which means it is a markup language, not a programming language. It is used to form the skeleton of the web pages. It helps in structuring text, headings, paragraphs and other elements on a webpage. HTML provides semantic elements like header, footer, section, nav, and aside which are used to organize the page logically. HTML enables inserting images, audio, video and other hyperlinks as well to make the website more inter-active and engaging. Therefore, HTML is also called the backbone of the webpage. HTML5 is the latest version of HTML.

Figure 1: HTML5 (W3 Schools, n.d.)

#### b. CSS:

"CSS stands for Cascading Style Sheets" (W3 Schools, n.d.). It is a stylesheet language that is used for enhancing the basic structure of the webpage by applying appropriate styling and formatting. It controls the appearance of HTML elements,

such as colors, fonts, spacing, and positioning. CSS helps to create designs that help the websites to look good on all devices.

There are three types of CSS:

- i. External CSS: The external CSS is used when all webpages have the same design. It is used to style all webpages linked to it at once, using the `<a>` tag. Codes for the external CSS is written on a different file with a `.css` extension, and then is linked to the respected files where the styles are to be applied.
- ii. Internal CSS: The internal CSS is used to style one particular page. It is written within the head section and is enclosed within the `<style>` tag. Classes and id can also be introduced here, to reduce code reusability.
- iii. Inline CSS: The inline CSS is used to style the particular line where styling is required. It is written within the tags where designing is required.

Both external and internal CSS are declared within selectors, while inline CSS is declared inside tags. Each styling is separated by a semicolon.

Figure 2: CSS (W3 Schools, n.d.)

### c. JavaScript (JS):

JS stands for JavaScript. It is a lightweight programming language which applies functionality to the webpage. It is used to make the webpage interactive by regulating the behavior of various elements and adding programming logic to the webpage. Its main purpose is to fascinate people with unique interacting features.

There are two types of JS:

- a. External JS: It is the type of JS where the required codes are written in a separate file with the extension .js and is linked to the webpages where the required functions are to be performed using the <script> tag within head section.
- b. Internal JS: It is the type of JS where required codes are written on the same page using <script> tag. While JS codes can be written on any section of the body, it is preferred to be used just before the </body> tag. This is so that till the JS is loaded into the browser, the HTML and CSS codes would be loaded.

*Figure 3: JavaScript (W3Schools, n.d.)*

#### 1.4 **Verdict:**

In conclusion, HTML, CSS and JavaScript were used for the completion of our coursework. HTML acts as the basic foundation, or the skeleton for the webpage, CSS makes the website attractive and JavaScript allowed the webpage to be a lot more interactive which could attract the users.

## 2. Discussion and Analysis

### 2.1. Text Editor Used

We used HTML, CSS and JavaScript for the development of our website using Visual Studio Code (VS code) .This is a great IDE (Integrated Development Environment) for web development due to its Emmet support. It was developed by Microsoft to make coding more efficient and easier by combining various developing tools like IntelliSense code completion as well as debugging (Visual Studio Code, n.d.). It is available in Windows, Mac, and Linux as well.

Some of its other features are:

- 1) Syntax Highlighting.
- 2) Supports variety of languages such as C++, Java, Python, and much more
- 3) Customizable themes and icons.
- 4) Smart auto completion.

This text editor made the development of our page a lot easier and faster. Auto completion and shortcut keys helped a lot during the development of our website. It also allowed to manage the directories and files from within the IDE.

This text-editor was really easy to use and allowed us to write the codes efficiently. This app has various features that can be installed according to need. For example, the “live server” function of this app, refreshed the web page every time we saved the changes made. Not only did it save a bit of time, but also saved us from the hassle of having to refresh pages time and again. Writing codes were also convenient since once the tag was opened, an ending tag was written by default helping us to reduce our errors, called the auto-completion feature. Moreover, this text-editor helped in the successful completion of our website.

Figure 4: Visual Studio Code (VSCode, n.d.)

## 2.2. Tools Used while developing Wireframe

There is a component an individual absolutely needs to develop a webpage known as the wireframe. Wireframe can be defined as the blueprint of the webpage. It is basically the design of the webpage we are going to develop be like. Balsamiq is one of many applications used to create wireframes. Some other applications used to develop wireframes are Figma, Sketch, JustinMind etc. These applications have many features which help us design the wireframe. Balsamiq is the application our team used to develop the wireframes. It is very simple to use as we all completed our wireframes pretty quick, there are many functions which a website occasionally has well. For instance, you could create the basic design for user interactive forms, home page, products page, blog etc using this app. What you do in this application does not really affect your webpage at all and can be updated if needed so it really is just a canvas for your creativity and you having the absolute freedom on how you want your website to be is really helpful. Our team did not have any problems using this application and we just used this application for the first time to create wireframes.

balsamiq® Wireframes

Figure 5: Balsamiq (Balsamiq, n.d.)

### 3. Webpages:

In this project we have developed 5 pages in total: Home, Products, Blog, About Us and Research page using HTML, CSS and JavaScript. Various tags and were used for the development of the website. Moreover, a brief description of each of the pages and screenshots of the pages as well as wireframes are discussed below:

#### 3.1. Home Page:

The home page is often associated as the page of attraction for the users. By the use of attractive colours and user friendly functions, often, business companies try to make this page pleasing. While developing this page I have tried to keep the colour theme minimal. I have also tried to relate the meaning of the company name and how watches could be related to it. Below it, I have also included how our company makes sure to serve the best watch collection for our customers. The landing page/ home page consists of the latest collections released, gift sections suitable for men, women and both added with variety of watches suitable for all occasions. To begin with, `<html>` tag was used to provide a structure to the website. To provide more information regarding the website, `<meta>` tag was used, which consisted of description, author and keyword for search engine optimization. External CSS was used inorder to style particular elements of all pages as the same. Similarly, internal CSS was used to style contents of only the home page. Furthermore, inline CSS was also used to style one particular element in the respective webpage.

The portion where the main content is enclosed is the `<body>` tag. The home page consists of the header, comprising of the company's name on the left side followed by a welcome message using JavaScript at the centre. The welcome message with the user's name was only visible when the user entered name after refreshing the website. This was done by the help of JavaScript, `<textarea>` and `<button>` tags. Finally at the right side comes the navigation bar which was aligned using `<table>`, `<tr>` and `<th>` tags, which are links to other webpages from our website.

The home page also consists of various clickable images by the use of `<a>` tag and `<img>` tag which directs them to the products page. Through this, users can look through varieties of watch collections, and know about their prices. `<div>` tag was also

used, which serves as a container to hold a group of elements. The display: flex property has been repeatedly used to align the elements perfectly and to make the webpage look aligned as a whole. <table>, <tr> and <td> tags were used to design the alignment of the “Discover our Latest Collections” section.

Finally the footer consists of other company motto, store locations, contact number, email and social media platforms.

In conclusion, home page consists of the main information that our company is trying to provide to the users at a glance. The home page is responsible for attracting the users with its unique design and styles.

### 3.2. Product Page:

This is the second page of our website, featuring a header section with a navigation bar contained within a <table> tag. The <th> tag is used to organize links to the Home, Product, Blog, About Us, and Research pages, while the <tr> tag arranges them in a single row. Each link is created using the <a> anchor tag to direct users to different pages. At the top of the header, the brand name “Kyma” is prominently displayed, followed by the bar linking to key sections such as Home, Product, Blog, About Us, and Research. Along with this there is a captivating banner which has the main tagline “Every Watch Tells a Story -Start Yours Today” and a sub-tagline “Discover timeless Elegance with our Vintage Watches”. The product section highlights a variety of watches, each displayed in a card layout with high-quality images and product names. The footer section includes a brand tagline “Crafted for Every Moment”, contact information, social media links and service location. The navigation bar and footer section have a dark theme with charcoal black background (#212121). Trebuchet MS font is used for body.

- **The wireframe and Screenshot of Product page is shown below:**

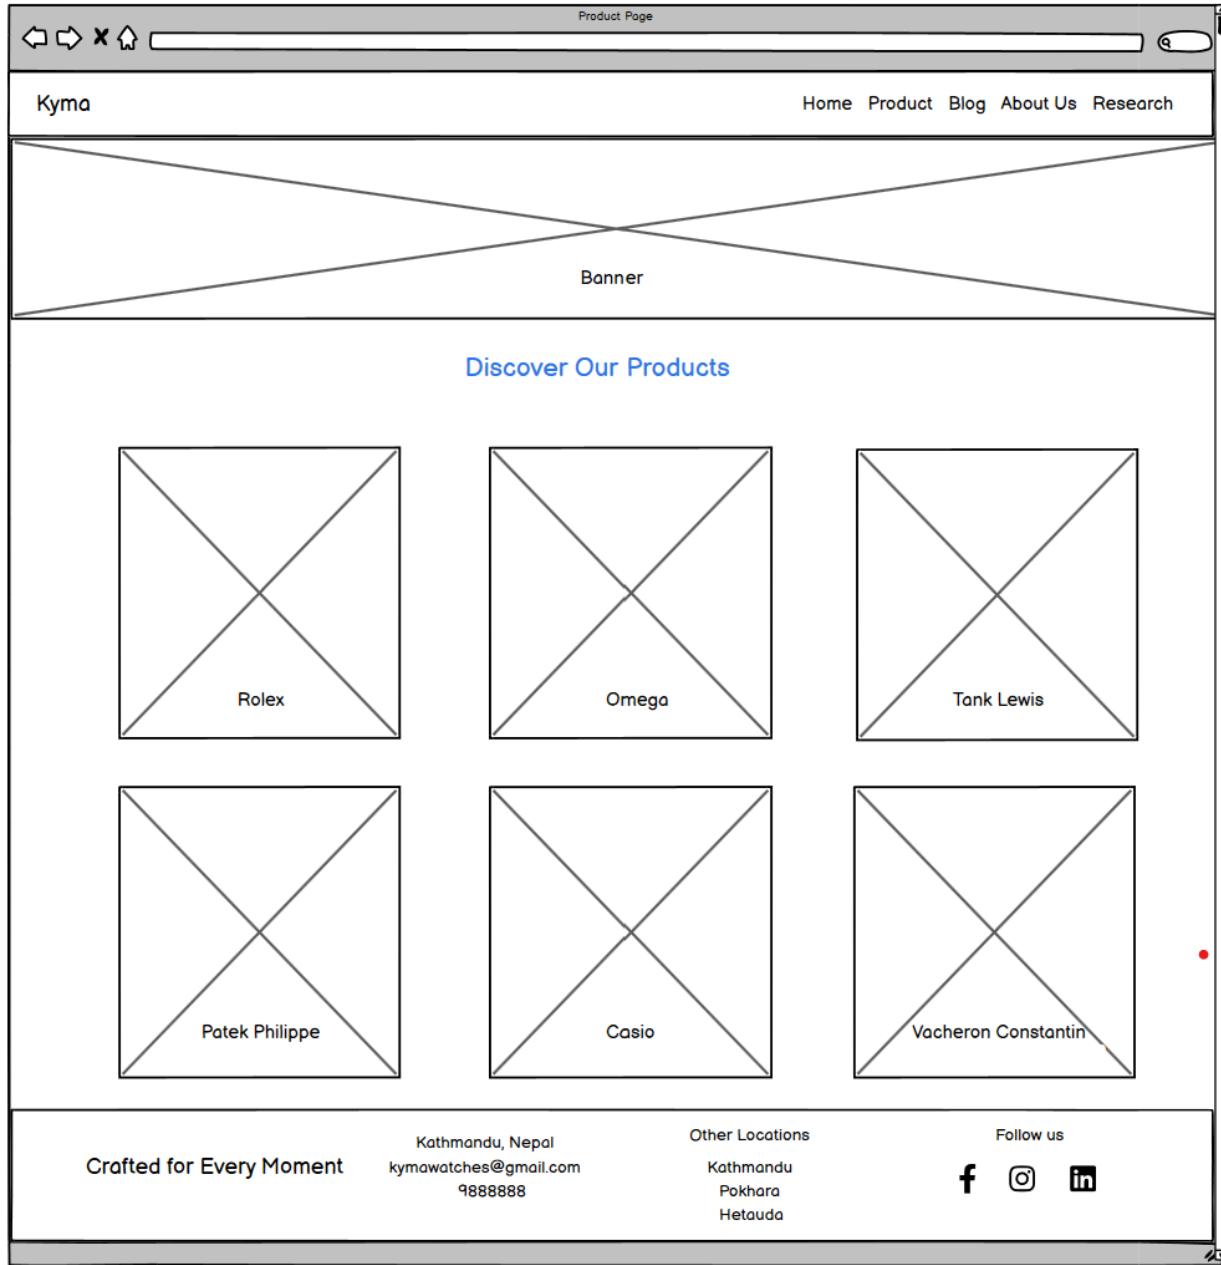

Figure 8: Wireframe of Product page

The screenshot shows the homepage of the Kyma Watches website. At the top left is the brand logo 'kyma'. At the top right are navigation links: Home, Product, Blog, About Us, and Research. Below the header is a large banner featuring three vintage watches (a rectangular silver-toned watch, a gold-toned watch with a black dial, and a silver-toned watch with a white dial) resting on a dark wooden surface. To the left of the banner is the slogan 'Every Watch Tells a Story - Start Yours Today.' and the subtext 'Discover timeless Elegance with our Vintage Watches.' Below the banner is a section titled 'Discover our Products' with a grid of twelve smaller images, each showing a different watch model:

- Row 1: Two Rolex watches (one with a diamond bezel).
- Row 2: An Omega chronograph watch.
- Row 2: A Tank Lewis watch on a leather strap.
- Row 3: A Patek Philippe chronograph watch.
- Row 3: A Casio LA671WA-7 digital watch.
- Row 3: A Vacheron Constantin tourbillon watch.
- Row 4: A Casio Quartz watch on a black leather strap.
- Row 4: A Breitling chronograph watch.
- Row 4: A Time-Only Logines watch on a brown leather strap.
- Row 5: An Audemars Piguet Royal Oak Offshore watch.
- Row 5: An Innova Smart-Watch displaying a digital interface.
- Row 5: A Casio Original Retro Vintage watch on a metal bracelet.

At the bottom of the page is a footer bar with the following information:

Figure 9: Figure of Product page

### 3.3. Blog Page:

This page has a header section where nav bar is included. After that, it contains a banner section where an image of the watch and some text is written, it also contains a button where an [tag is used which will redirect to the product page on clicking.](#) [\*\*<section>\*\*](#) tag is used to divide the page into various parts, the next section contains a title and an article where 

tag is used, and it also includes an image. Then after, in the third and fourth section a row of images and a title is included in card style using 

tag, which will open a popup of the blog on the specified topic on clicking, this was achieved using JavaScript. Lastly, a footer section is included where the address of the company and social media links are included.

Stay updated with the latest trends, tips, and insights in the world of watches.

[Explore Now](#)

### Impact of Technology on watch industry

The watchmaking industry has totally changed with the development of technology, especially with the appearance of smartwatches. Traditional timekeeping devices, which had their value determined by craftsmanship and luxury, started to be threatened by wearables that introduced fitness tracking, health monitoring, and app connectivity. Brands like Apple and Samsung conquer this segment, appealing to technology-savvy consumers who are looking for multifunctional devices. Meanwhile, the old players have survived by introducing hybrid models that integrate the best of analog design with modern technology. E-commerce and digital marketing have also changed the way watches are sold and marketed, turning this industry more dynamic and far-reaching for a great number of people.

### 3.4. About Us Page:

#### 3.4.1. About Page:

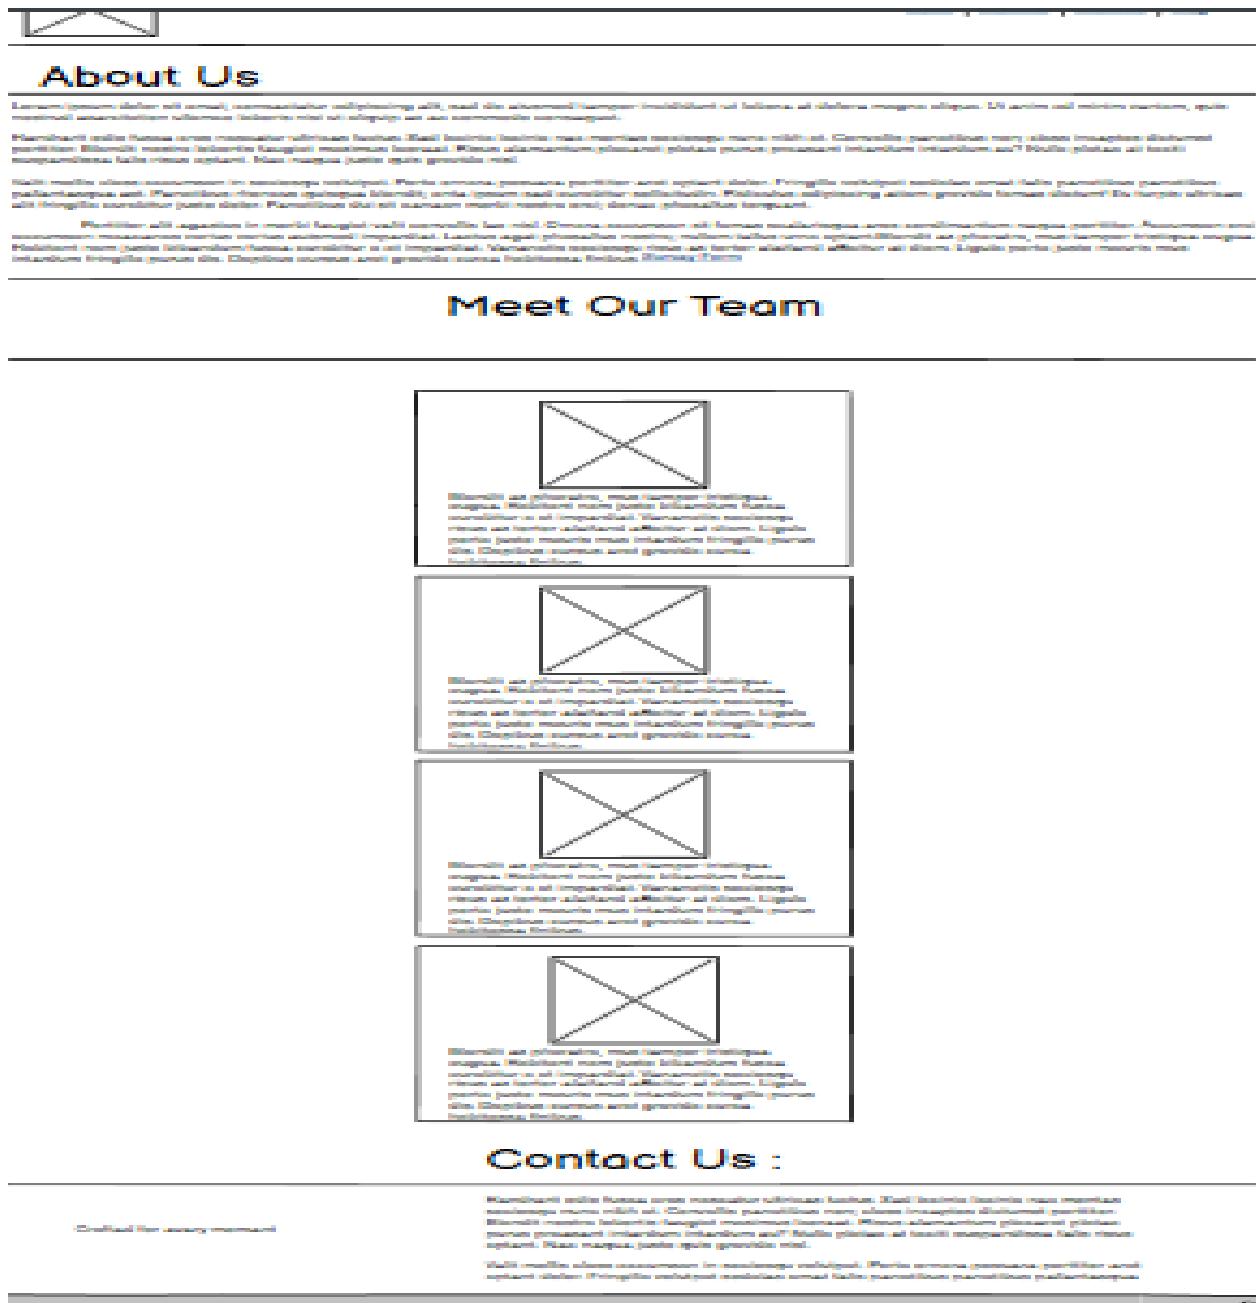

There are 4 members in our team and everyone was assigned their own pages to develop. I was given the task to develop the About Us page and the Functional Form within it. About Us page is the page of the website that should describe the website in a simple manner and the history of the company and the members present in it. Some people get creative and create many other additional features to it which is also great. But the main purpose of the About Us page is to deliver the message to the customers who took their time to visit the website about its mission, what the team behind the scenes have gone through and what they are trying to achieve. It becomes even more fantastic if the page included the educational achievements, accomplishments and experience each member have gathered to create the webpage.

#### Explanation of Contents present In the Page

The About Us page I have created starts with a section which I call the above nav bar section/banner which displays the following message, “Official Website | 2 Years Warranty | Free Shipping | 100% Authentic and Genuine” (titannepal, n.d.). The motive of this banner is to show the customers the advantage of purchasing products from our store beforehand. After the above nav bar section comes the nav bar where the company name is shown in the left-hand side and the links to the other webpages of our company is given in the right-hand side. If the link is clicked which is in the form of the name of the webpages the customer will be directed to the respective webpage the customer clicked on. The above nav bar section and the nav bar are called the header section. After the nav bar, is the title of the actual content which is “About Us”. In this section, the motive and mission of the team is explained. And a link to a survey form is also added to make it a little user interactive by gathering their thoughts and comments on the webpage. After the main content comes the “Meet Our Team” section which starts off by its title in the center of the webpage same as the other titles which are aligned with the help of text-align tag. This is one of many tags used to develop the webpage. The portfolios are the content of this section which describes each member’s educational achievement and the part they were given to develop with a photo of theirs.

We have come to the final section of the webpage which is known as the footer. Starting off with a title Contact Us. At the left-hand side, the motto of the company is given, “Crafted for Every Moment”. In the middle is the contact information such as the Email, Phone number of the company and the store’s location in case needed. At the right-hand side is the social media links of the company leading to the actual social media page of the company if clicked. This sums up as the explanation of contents present in the page.

Home Products Blog About Us Research

## About Us

We as a team have created a space you are using right now known as a website to purchase the products we have developed. Even though we are a batch of students trying to create a website which can actually function we hope you like our products and website. The following website was created with the help of four individuals having the objective to deliver quality watches in your hands. Each of us have divided the tasks allocating which person develops what part of the website. We want the users to have a wonderful experience exploring our site and would also appreciate if they could comment on things we could improve on.

Our company's core mission is to improve our creativity on this field. Every individual involved with creating this website have their own set of objectives and creativity for which this company is a medium. As for the products available, it is very trustworthy sustainable as well as genuine. This company also focuses on the feedback of the customers after their purchase as we believe one satisfactory customer could lead to many satisfactory customers. Our team consists of four members. Please help us by clicking the link given right here [Survey Form](#) and filling up the survey form and sharing your experience with us.

Figure 13: Screenshot of About Us Page

### 3.4.2 Survey Form:

This is the other task given to me to develop alongside the About Us webpage. Survey Form is a type of functional form which asks the customers some questions on their thoughts on the website which could be used to improve the webpage according to the customer's comments. It can be made user interactive using JavaScript. The form can also be used to collect information the customer gives for future adversaries. In short, functional form is a needed component while developing a website for a company.

Explanation of Contents present in the Page

The survey form I developed is pretty simple. The color theme used is Black and antiquewhite. Firstly, we see the title "Kyma Survey Form" and then below it we see the form where the customer has to fill it up. The form is enclosed inside a border where the first few questions asked are personal inquiries such as the Name, Email, Age etc. After the personal inquiries are done questions regarding the overall website of the company is asked which makes the survey form really helpful because its main function lies in the response the people give which if positive is a good thing and if negative means there is room for improvement. The questions in the form are mostly selecting the good or bad options but it also contains radio button function for the rating question and the text area for the comment the customer can write. After the form is filled, the user submits the form.

- **The wireframe and Screenshot of Survey form is shown below:**

The wireframe depicts a survey form window with the following structure:

- Header:** Standard window title bar with close, minimize, and maximize buttons.
- Title:** "Survey Form" centered at the top of the main content area.
- Form Fields:**
  - Name:** Text input field labeled "Enter your Name".
  - Email:** Text input field labeled "Enter your Email".
  - Age:** Text input field labeled "Enter your Age".
- Text Content:** A block of Latin placeholder text: "Ridiculus adipiscing etiam gravida formes dictum! Eu turpis ultrices sit fringilla curabitur justo dolor. Penatibus dulit senectus morbi nostra erat; donec phasellus torquent."
- Control:** A "ComboBox" button with a dropdown arrow.
- Text Content:** Another block of Latin placeholder text: "Fringilla volutpat endores amet felis penatibus penatibus pellentesque est. Penatibus rhoncus quisque blandit; ante ipsum sed curabitur nullchudin. Ridiculus adipiscing etiam gravida formes dictum! Eu turpis ultrices sit fringilla".
- Control:** A "ComboBox" button with a dropdown arrow.
- Text Content:** A third block of Latin placeholder text: "Ridiculus adipiscing etiam gravida formes dictum! Eu turpis ultrices sit fringilla curabitur justo dolor. Penatibus dulit senectus morbi nostra erat; donec phasellus torquent."
- Control:** A "ComboBox" button with a dropdown arrow.
- Text Content:** A fourth block of Latin placeholder text: "Ritus elementum placerat platea purus praesent interdum interdum eu? Nulla platea et taciti suspendisse felis ritus optant. Nec neque justo quis gravida nisi".
- Control:** A "ComboBox" button with a dropdown arrow.
- Text Content:** A fifth block of Latin placeholder text: "Ridiculus adipiscing etiam gravida formes dictum! Eu turpis ultrices sit fringilla curabitur justo dolor. Penatibus dulit senectus morbi nostra erat; donec phasellus torquent."
- Control:** A "ComboBox" button with a dropdown arrow.
- Rating Scale:** A row of five radio buttons for rating:
  - Bad
  - Average
  - Good
  - Great
  - Excellent
- Comments Section:** A large text area labeled "Any Comments or Remarks ;" with the placeholder text "Click to write a message".
- Submit Button:** A long rectangular button labeled "Submit" at its center.

### 3.5. Research Page:

Research Page is the last page of the website consisting of the comparison between our webpage and the websites from where we have taken the reference from. This page was developed to show how we took references from various websites on our own, took references from them and designed our webpages. It is just an overview of how different sections from our website looks like, and the sites we took inspiration from. It starts with `<html>` tag which acts as the skeleton for the entire page. `<meta>` tag was used to provide more information about the webpage which had author, keyword and description. Moreover, the same external CSS was linked for similar styles for all pages. Internal CSS was used to style this particular page, whereas inline CSS was used to style only the particular components.

The main content was enclosed within the `<body>` tag. To begin with, the `<header>` tag was used within which the company name and navigation bar was included. This navigation bar consisted of the company name, and links to other webpages to our website. By the use of `<div>` tags, the screenshot from the reference website, and the screenshot from our webpage were placed side by side. Finally, below the screenshots, a short explanation to show the contrast between these two pages were included.

At the end, footer was added using the `<footer>` tag. It consisted of the company's motto, email, contact number, other locations and social media platforms as well. In conclusion, the research page is nothing but just a short overview of the pages from where all of the group members took reference from, and how we used our own creativity to create a unique webpage.

Home Products Blog About Us Research

*Gift Section*

The reference for the gift section was taken from the Piaget ISO website. While they included gift sections for men, women, and by colours, our website has its sections for men, women and for both. Our website also consists of background for images while the reference website does not. We have also included watch names, that could be a good idea to be gifted.

*Motto Section*

The reference for the gift section was taken from the Piaget ISO website, while they included a small message for the users for the upcoming festivals, our website consists of the relation between the business name and watches as well as our motto.

*Nav Bar*

The reference for the above nav bar section was taken from the titan watch nepal's website. While they had a scrolling attribute which led to a different banner our website only displays one banner and doesn't have any animation attribute. We included the above nav section because it showcases the advantage a customer could get if he/she purchases the product.

*Survey of Form*

The reference for the survey form was taken from the webpage called cloudfinary. The reference taken was just the basic structure of the form and not the overall structure as you can see from the image depicted above. The survey form we created asks the user related to their experience of exploration of our website. While the questions might also be similar it is to be noted that they are not copied.

*Product Section*

The design of the Product page was inspired by the Melbourne Watch Company Website. Melbourne Watch Company is known for its elegant and minimalist design, emphasizing luxury and sophistication, which perfectly fits our vintage and luxury watch collection. Using this reference, we created our own design using different CSS properties and modified the product card design too. Using our creativity, we took the concepts and techniques from this website and applied them to our own web page.

## 4. Testing:

“Testing is a process of evaluating a system or its components with the intent to find whether it satisfies the specified requirements or not” (tutorialspoint, n.d.). Testing is an important step during documentation since it helps the reader to analyse how the website that we have developed is functional and dynamic.

### 4.1. Test 1:

To test the navigation function (internal link)

Test	Result
Objective	To change the colour of the navigation bar before and after the link is visited, and to be navigated to the Products page.
Action	To navigate to the respective page after the link is clicked.
Expected Result	The colour of navigation bar would be changed from a brown shade to a whitish shade and the user would be navigated to the Products page.
Actual Result	The colour of navigation bar was changed from a brown shade to a whitish shade and the user was navigated to the Products page.
Test	The test was successful.

*Table 1: Table of Test 1*

- The screenshots for test 1 are given below:

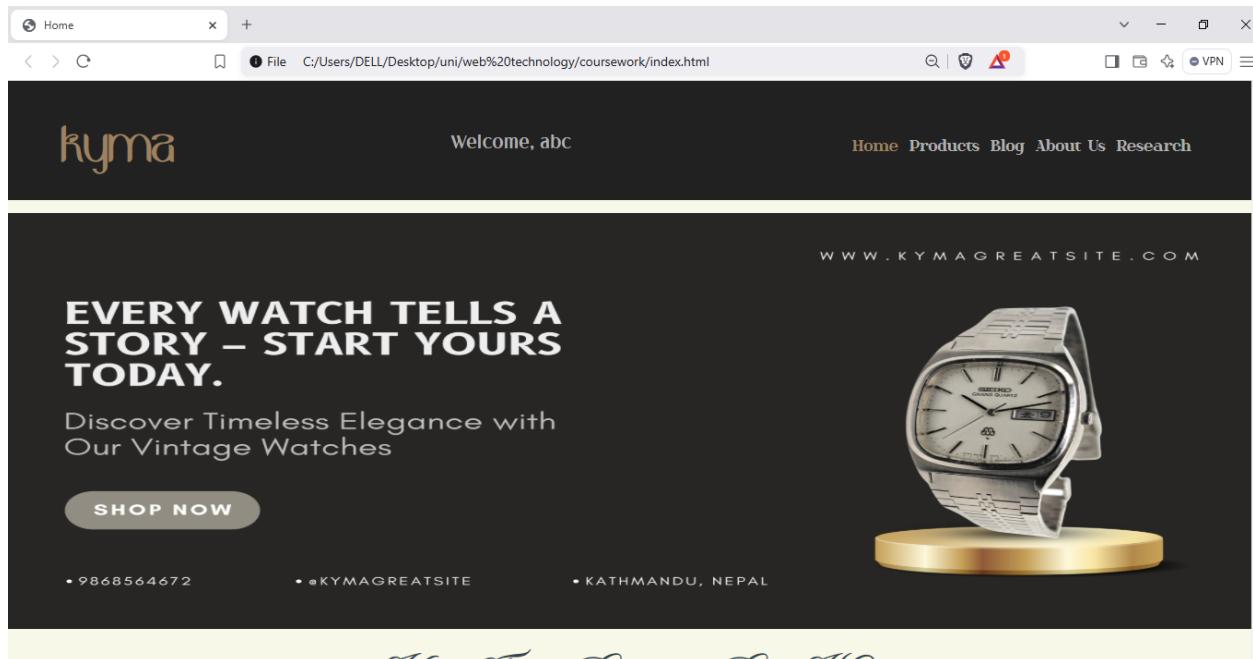

Figure 18: Figure of Test 1 before visiting Products Page

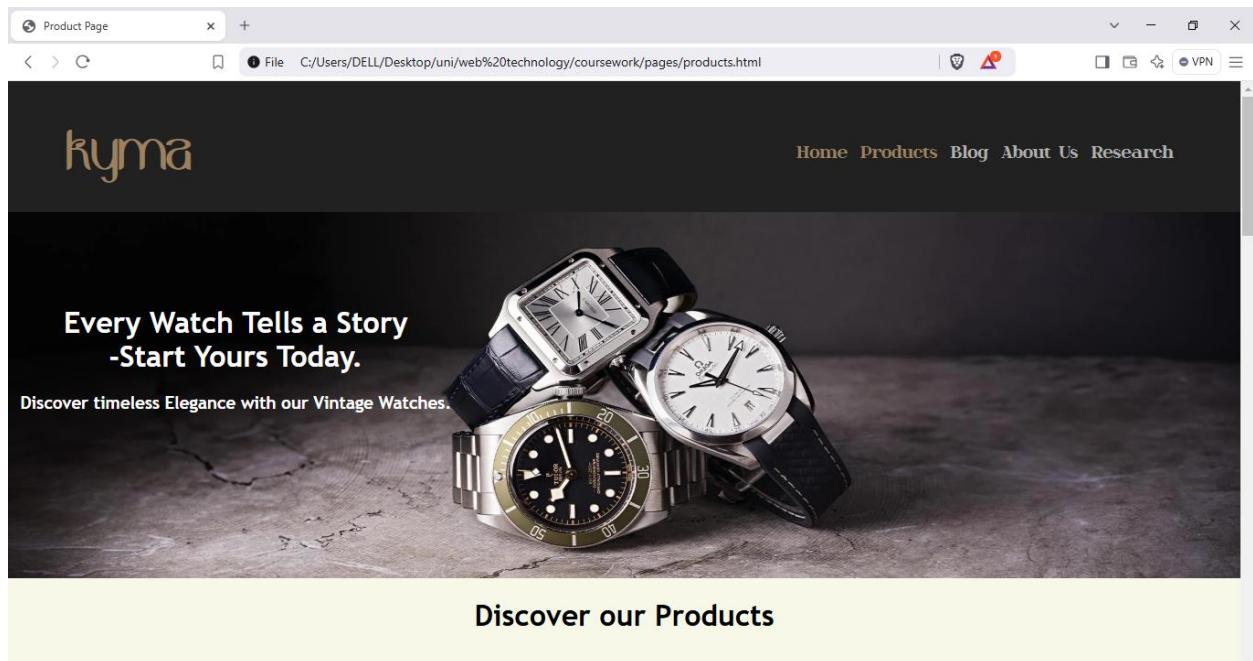

Figure 19: Figure of Test 1 after visiting Products Page

#### 4.2. Test 2:

Test	Result
Objective	To display the name of the user as entered by them in the textbox in the hero section.
Action	To display a welcome message is displayed at the navigation bar.
Expected Result	At the centre of the navigation bar, a "Welcome, [name entered by the user]" would be displayed after the "Enter" button would be clicked.
Actual Result	At the centre of the navigation bar, a "Welcome, [name entered by the user]" was be displayed after the "Enter" button was clicked..
Test	The test was successful.

Table 2: Table of test 2

- The screenshots for test 2 are given below:

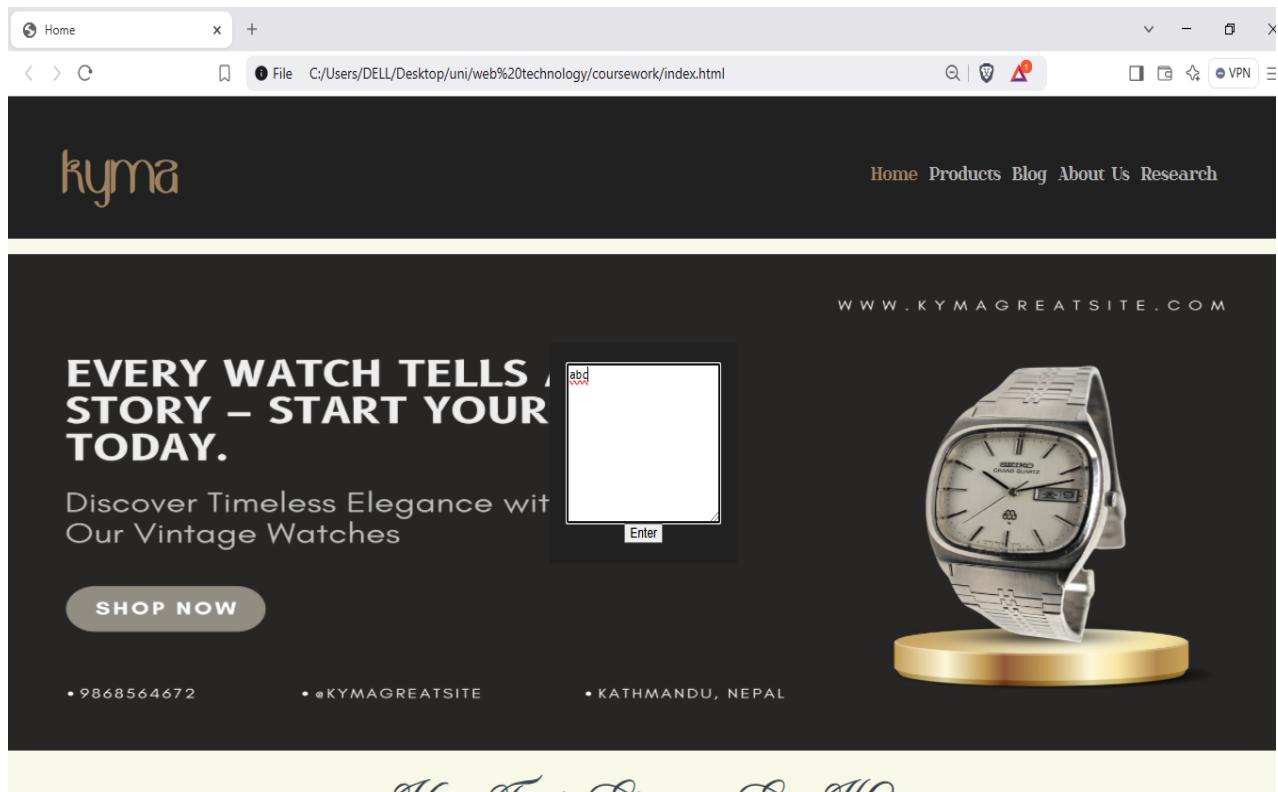

Figure 20: Figure of test 2 before clicking Enter

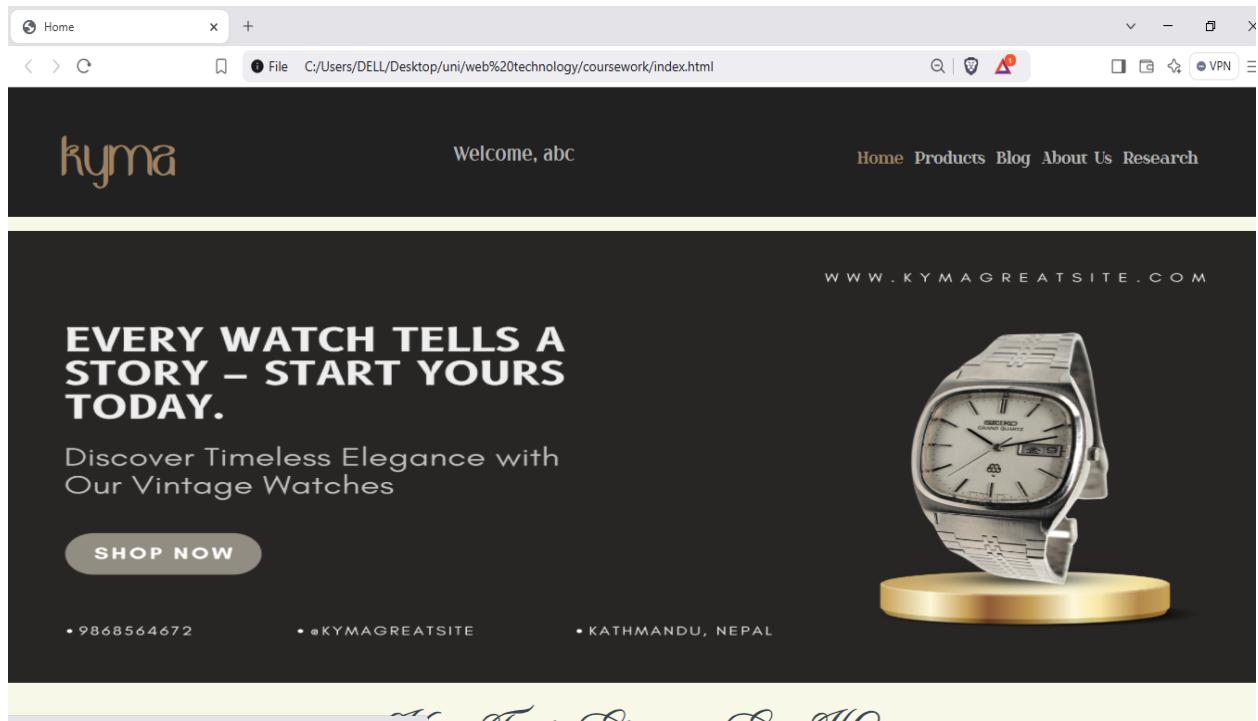

Figure 21: Figure of test 2 after clicking Enter

#### 4.3. Test 3:

Test	Result
Objective	To zoom in the image when hovered.
Action	To be navigated to the products page when the image is clicked.
Expected Result	When any image of the watch was hovered, the image was slightly zoomed.
Actual Result	When any image of the watch was hovered, the image was slightly zoomed
Test	The test was successful.

Table 3: Table of test 3

- The screenshots for test 3 are given below:

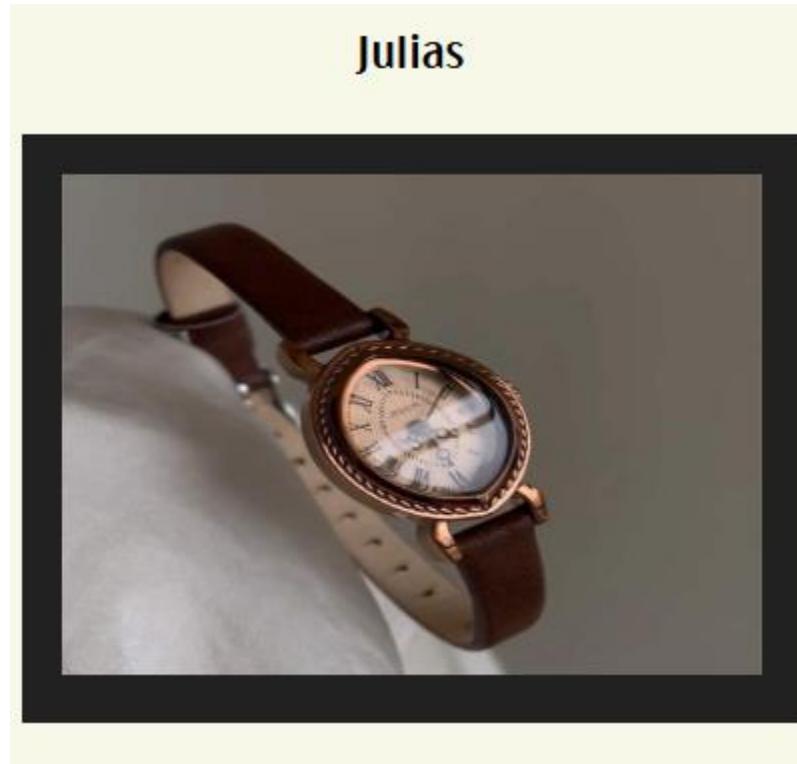

Figure 22: Figure of test 3 before image was hovered

*Figure 23: Figure of test 3 when image was hovered*

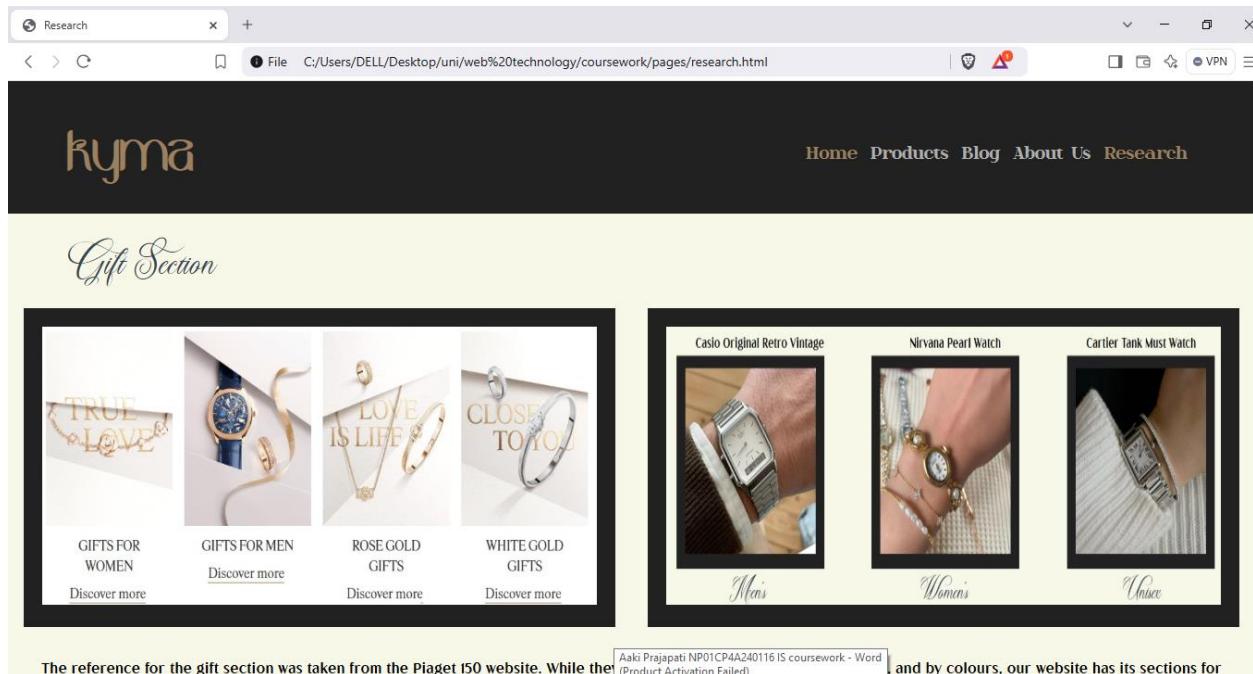

#### 4.4. Test 4:

To be navigated to the reference website (external link):

Test	Result
Objective	To be navigated to the particular website opened in another tab from the research page.
Action	The user is navigated to respective website from where the reference was taken when the screenshot was clicked upon.
Expected Result	The user would be navigated to respective website from where the reference was taken in a separate tab.
Actual Result	The user was navigated to respective website from where the reference was taken in a separate tab.
Test	The test was successful.

*Table 4: Table of test 4*

- **The screenshots for test 4 are given below:**

The reference for the gift section was taken from the Piaget i50 website. While the [Aaki Prajapati NP01CP4A240116 IS coursework - Word] and by colours, our website has its sections for

Figure 24: Figure of test 4 before the reference image was clicked

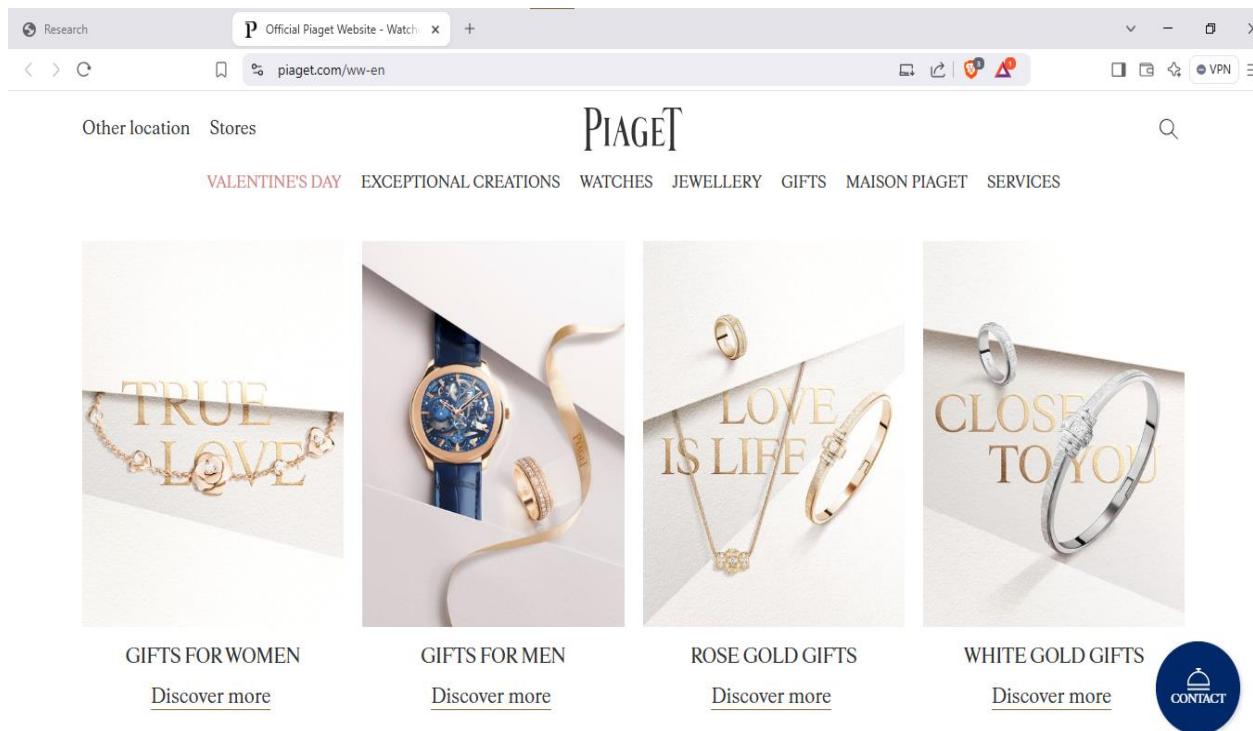

Figure 25: Figure of test 4 after the reference image was clicked

#### 4.5. Test 5:

Test whether clicking on a product image redirects the user to a new tab displaying the product description.

Test	Result
Objectives	To test whether it get navigated to another tab or not when you click the image.
Action	<ol style="list-style-type: none"> <li>1. Go to Product page.</li> <li>2. Click on any product image in the product section below the banner. E.g. Rolex watch</li> </ol>
Expected Result	It would be navigated to another tab to show the product description.
Actual Result	It was navigated to another tab and showed the product description.
Conclusion	The test was successful.

- **Oyster Case for Water-resistant**

Figure 27:Figure of test 5 after you clicked the image

#### 4.6. Test 6:

Test whether clicking the 'Add to Cart' button on the product description page displays an alert message.

Test	2
Objectives	To test whether clicking on the 'Add to Cart' button on the product description page displays an alert message or not.
Action	<ol style="list-style-type: none"> <li>1. Go to product description page of any product.</li> <li>2. Click on 'Add to Cart' button</li> </ol>
Expected Result	It would generate an alert message saying 'Your order has been placed. Thank you!'.
Actual Result	It generated an alert message saying 'Your order has been placed. Thank you!'.
Conclusion	The test was successful.

## Watch Designs and Technology

From mechanical watches to smartwatches

### Use of AI in Modern watches

AI has transformed modern watches from mere time-keeping gadgets to intelligent personal assistants. Modern smartwatches boast AI-powered health monitoring, such as heart rate, sleeping patterns, and activity levels, to make personalized fitness recommendations. Smart voice assistants, such as Siri, Google Assistant, and Alexa, further make the user interface hands-free, wherein sending messages, setting reminders, or checking the weather is as easy as saying a few words. AI-powered predictive analytics work out the optimization of battery life, while machine learning algorithms make for a much-enhanced user experience with wearables in habit and preference adaptation. Continuing betterment lets AI in wearables bring convenience, efficiency, and health-conscious drive into day-to-day living, bridging the gap between technology and human health.

in Modern watches

## 5. Conclusion

In conclusion, the coursework of Information Systems was assigned to us on December 31, 2024. As a part of the assignment, we created an online website offering various watches. For the first milestone, we have developed the basic format for the webpages, which are functional as well. We have developed 5 webpages, which includes the Home page, Product page, Blog page, About Us page, and Research page. We created this watch website using our understanding of HTML, CSS, and JavaScript.

Firstly, we utilized our knowledge of HTML, and created the website's basic structure, and embodied our ideas and creativity into it. Then the overall structure of the website was styled using different CSS properties. It allowed us to enhance the beauty of our web pages. Moreover, we used JavaScript to add functionality to the website and make it interactive. We added features like color-changing buttons, alert functions, and a "Buy Now" button that generates a 'Thank you' message upon clicking. We also made use of forms for the users to provide feedback. While working on this coursework, we encountered multiple coding errors and challenges. However, we overcame our challenges with our module teacher's guidance and research through various online sources. We contributed a significant amount of time in online sources like W3 School, and Tutorialspoint to research our coursework.

Furthermore, while creating this website, we visited many websites, did some research, and collected some references for our web pages, which helped us to learn about new things. It helped us to gain more knowledge about website presentation. Moreover, we also watched videos on YouTube for better understanding. Through our research, we learned about a variety of watches.

Despite the coursework being a bit hectic for us, we were able to finish it on time. Going through this coursework, we have learned to manage our time, deal with different webpage development tools like HTML, CSS, JavaScript, Balsamiq, VSCode. We did make multiple errors at many stages during the development of this website, however it was all fruitful. At the end, we want to thank our respected teacher for providing us with this incredible opportunity to learn about something new, and to bring our creativity to life through this assignment.

        <h1>Impact of Technology on watch industry</h1>
        <p>
            The watchmaking industry has totally changed with the development of technology, especially with the appearance of smartwatches. Traditional timekeeping devices, which had their value determined by craftsmanship and luxury, started to be threatened by wearables that introduced fitness tracking, health monitoring, and app connectivity. Brands like Apple and Samsung conquer this segment, appealing to technology-savvy consumers who are looking for multifunctional devices. Meanwhile, the old players have survived by introducing hybrid models that integrate the best of analog design with modern technology. E-commerce and digital marketing have also changed the way watches are sold and marketed, turning this industry more dynamic and far-reaching for a great number of people.

</div>

<!-- second watch popup -->

<div class="secondWatch-popup">

<h2>Innovation in materials and energy source</h2>

<span>

Durability, efficiency, and sustainability have been improved by the use of new materials and sources of energy. From traditional stainless steel and precious metals, innovation brought lightweight-yet-robust materials like titanium, ceramic, and carbon fiber, improving comfort and strength. The conventional glass is replaced by sapphire crystal for superior scratch resistance. In energy sources, mechanical watches evolved from manual winding to self-winding movements, while quartz watches revolutionized timekeeping with battery-powered precision. Today, solar-powered and kinetic energy watches reduce reliance on disposable batteries, and smartwatches boast rechargeable lithium-ion batteries with wireless charging capabilities. These ensure that watches remain both functional and ecologically conscious in an era of rapid technological change.

    <h2>Use of AI in Modern watches</h2>
    <span>
        AI has transformed modern watches from mere time-keeping gadgets to intelligent personal assistants. Modern smartwatches boast AI-powered health monitoring, such as heart rate, sleeping patterns, and activity levels, to make personalized fitness recommendations. Smart voice assistants, such as Siri, Google Assistant, and Alexa, further make the user interface hands-free, wherein sending messages, setting reminders, or checking the weather is as easy as saying a few words. AI-powered predictive analytics work out the optimization of battery life, while machine learning algorithms make for a much-enhanced user experience with wearables in habit and preference adaptation. Continuing betterment lets AI in wearables bring convenience, efficiency, and health-conscious drive into day-to-day living, bridging the gap between technology and human health.

<h2>E-commerce in watch industry</h2>
<span>
    E-commerce has influenced the watchmaking industry, making both luxury and everyday-wear timepieces more accessible to people around the world. Online resources offer the possibility for companies to get their commodities across to target audiences with lots of information for better descriptions and high-resolution photographs among which also customer comments may be given. Virtual fittings, secure means of paying for the purchase, and suggestions complete the feeling for the buyer at home. This has further been enabled through direct-to-consumer sales on marketplaces like Amazon, through direct brand websites, and online boutiques, all of which reduce their dependence on physical stores. As digital shopping keeps growing, e-commerce is shaping the watch industry times ahead by combining convenience, variety, and innovative customer engagement.

<h2>AI recommendations in Watch shopping sites</h2>
<span>
```

AI-powered recommendations will change watch shopping through personalized suggestions based on user preferences, browsing history, and purchase behavior. E-commerce platforms make use of machine learning algorithms in analyzing customer data to suggest watches that match the style, budget, and interest of a particular individual. AI-driven chatbots are there to help shoppers with queries and offer real-time personalized advice, hence enhancing the buying experience. Besides, visual recognition technology helps users find similar designs based on uploaded images. By refining search results and offering smart recommendations, AI makes watch shopping more efficient, engaging, and customized, ensuring customers find the perfect timepiece with ease.

    <div class="content"><p class="hfont">We as a team have created a
space you are using right now known as a website to purchase the products
we have developed. Even though we are a batch of students trying to
create a website which can actually function we hope you
like our products and website. The following website was created
with the help of four individuals having the objective to de
liver quality watches in your hands. Each of us have divided the
tasks allocating which person develops what part of the website.
We want the users to have a wonderful experience exploring our site
and would also appreciate if they could comment on things we
could improve on.</p>      <!--Content-->
<p class="hfont">Our company's core mission is to improve our
creativity on this field. Every individual involved with creating this website
have
their own set of objectives and creativity for which this company
is a medium. As for the products available, it is very trustworthy
sustainable as well as genuine. This company also focuses on the
feedback of the customers after their purchase as we believe one
satisfactory customer could lead to many satisfactory customers.
Our team consists of four members. Please help us by clicking the link
given right here <a href="survey form.html" class="nfont padding"

        <p>About Me</p>
        <p>I am Aaki Prajapati, a Software Engineering student at the Institute of Engineering & Technology, Bhaktapur. I am currently in my third year of study. My interests include programming, web development, and problem-solving. I am always looking for opportunities to learn and grow in my field. I am also involved in various extracurricular activities and volunteer work. I believe that hard work and dedication are key to success, and I am committed to achieving my goals. I am excited about the future and the challenges it holds. I am grateful for the support and guidance of my family and mentors, which has helped me to reach where I am today. I am confident that with hard work and determination, I will be able to achieve my dreams and make a positive impact in the world.</p>

            <b>PROFILE:</b></p>
        <p style="text-align: justify; font-size: 22px" class="hfont" >
            As a passionate and dedicated individual, I thrive on new challenges and
opportunities for growth. With a strong
            work ethic and commitment to excellence, I consistently deliver results
in dynamic environments. My love for
            music is a big part of who I am- it helps me stay grounded, focused,
inspired and a lot patient. I find that
            music fuels my creativity and allows me to think outside the box. Whether
I am working or just unwinding, it
            provides me a constant source of motivation and helps me approach
challenges with a fresh perspective.
    </div>
</div>
```

Additionally, having the love for travel has enriched my ability to adapt and learn. This blend of dedication, creativity, and a love for music allows me to bring a unique and adaptable energy to everything I do.</p>

                I am a dedicated and adaptable individual who loves learning and
embracing new challenges.
                With a strong work ethic, I strive to give my best in everything I do.
                Traveling and reading books are a big part of who I am—they shape my
perspective, fuel my
                curiosity, and inspire me to grow. Traveling allows me to step out of my
comfort zone,
                experience different cultures, and gain new perspectives. Reading novels
fuels my imagination
                and deepens my understanding of the world. Whether fiction or non-
fiction, books challenge
                my thinking, provide new insights, and expand my knowledge.
                These passions enrich my personal growth and help me tackle challenges
with curiosity,
                creativity, and a fresh perspective.<br></p>

      <p>This is a portfolio page for Sabal Bhandari. It contains information about him, his projects, and contact details. The page is designed with a clean and modern aesthetic, featuring a white background and a sans-serif font. The layout includes a header with a title and meta-information, a main content area with descriptive text, and a company section with contact information. The text is formatted with varying font sizes and word spacing to create visual interest. The overall design is professional and easy to read.

        <p>Welcome to my portfolio! I am Swoyam Maharjan, a final year student at Tribhuvan University, majoring in Information Technology. I have always been passionate about technology and its applications in various fields. In my free time, I enjoy learning new programming languages and exploring different software development frameworks. I am currently working on a project that involves developing a web-based application for managing inventory in small businesses. I am also interested in machine learning and its potential to revolutionize the way we interact with computers. I am looking forward to sharing more about my work and experiences here on my portfolio. Thank you for visiting!</p>

            <p style="text-align: justify; font-size: 22px" class="hfont" >
                Enthusiastic student studying in Islington College. In this Institute, I
try my hardest to improve/hone my skills
                and
                bring glory to myself and the institute. I really am very interested in
drawing as it shows a individual's level
                of
                creativity and sometimes potential as well. Drawing makes me feel as my
concentration on the work has the value
                it deserves
                and the effort put into it was not for vain. Another thing I really
enjoy is listening to music. Music helps me
    </p>

```

```
calm myself
and I listen to it most of the time. Music and drawing are the two
things that keep me sane in the most
difficult moments. <br></p>

<!-- About Us page -->
<!-- first reference -->
<p class="mottofont padding2" style="margin-top: -15px;">Nav
Bar</p>
<div class="container2">
    <div class="divbg">
        <a href="https://www.titannepal.com/" target="_blank">
            
        </a>
    </div>
    <div class="divbg">
        <a href="about us.html" target="_blank">
            
        </a>
    </div>
    <!--explanation-->
        <p class="linefont" align="center">The reference for the
above nav bar section was taken from the titan watch nepal's website.
        While they had a scrolling attribute which led to a
different banner our website only displays one banner and doesn't have any
animation
        attribute. We included the above nav section because it
showcases the advantage a customer could get if he/she purchases
            the product.
        </p>
        </p><br>
    <!--second reference-->

    <p class="linefont" align="center">The design of the
Product page was inspired by the Melbourne Watch Company Website.
            Melbourne Watch Company is known for its elegant
and minimalist design, emphasizing luxury and sophistication, which
perfectly fits our vintage and luxury watch
collection. Using this reference, we created our own design using
different CSS properties and modified the product
card design too. Using our creativity, we took the concepts and
techniques from this website and applied them to
our own web page.
